EDUCATION

Indian Institute of Information Technology, Kottayam

2023 – 2027

B.Tech – Computer Science and Engineering with specialization in AI and Data Science

SKILLS

Certification: Microsoft Azure AI Engineer Associate

Languages: C, C++, Java, Python, JavaScript, TypeScript, SQL, Go

Frontend: React, Next.js 14, Tailwind CSS, Material UI

Backend: Node.js, FastAPI, REST APIs, WebSockets, JWT Auth, Cron Jobs, asyncio

Databases: PostgreSQL, Prisma ORM, MongoDB, SQL, composite indexes, transactions

DevOps / Tools: Git, Docker, GitHub Actions, Vercel, Render, Postman, OpenCV

Core: OOPS, OS, System Design, DBMS, Software Architecture, Computer Networks, Compiler Design

PROJECTS

AEO Diagnostic + Meshery AI Adapter | *Python, FastAPI, Groq, Cohere, Ollama, React, Render, Vercel* 2026

- Engineered a **production multi-LLM backend** querying Groq Llama 3.3, Llama 3.1, and Cohere Command-A simultaneously using Python ThreadPoolExecutor — sub-3-second responses with structured JSON output, mention detection, position ranking, and sentiment scoring; React frontend with real-time score visualization hosted on Vercel.
- Extended into a **Meshery AI Adapter proof of concept** for CNCF open source: FastAPI endpoint accepts natural language infrastructure intent and returns manifests aligned with `designs.meshery.io/v1beta1` schema with **BYOM provider switching** (Groq/Cohere/Ollama) — fully live and operational.

Two-Wheeler Driving Behavior Scorer | *Blog | Python, OpenCV, YOLOv8, NumPy, React, FastAPI* 2026

- Developed a real-time ADAS system for **Varroc Eureka 3.0** scoring two-wheeler riding behavior (0–100) with a **React + FastAPI dashboard** featuring 60fps WebSocket video streaming, dual detection engines, **Constant-Acceleration Kalman filter** on ego-motion-compensated centroids via Lucas-Kanade optical flow, and calibration-free speed estimation using fleet-shared MPP ($m/px = w_{real}/w_{bbox}$).
- Engineered 6 behavioral metrics (hard brake, aggressive acceleration, lane weave, tailgating, sudden stop, helmet non-compliance) with **fleet-adaptive thresholds** ($brkthr = 2.5 + 0.6 \times |fleet_decel|$) and 18-frame cooldown; helmet detection via Otsu blob analysis with 30-frame majority vote; Re-ID by proximity to prevent occlusion splits.

Cal Clone – Full-Stack Scheduling Platform | *Next.js 14, React, TypeScript, Tailwind CSS, Prisma, PostgreSQL* 2026

- Constructed a **Cal.com-style scheduling platform** with Next.js App Router: event CRUD with unique URL slugs, per-day availability rules, timezone handling, real-time **double-booking prevention** via half-open interval overlap checks in Prisma serializable transactions, and Nodemailer email system for confirmations, cancellations, and 24-hour reminders via secure Cron jobs.
- Architected a **normalized 6-table PostgreSQL schema** with composite indexes on (`event_type_id`, `date`, `status`) and denormalized `end_time` for efficient overlap detection; delivered 11 REST API endpoints, admin dashboard with bookings view, multi-step public booking flow, JWT auth — shipped on Vercel.

EXPERIENCE

Open Source Contributor – Meshery / Layer5 (CNCF) | *TypeScript, React, Go, GitHub Actions* 2026 – Present

- Active contributor to **Sistent** (Layer5's React/TypeScript design system, CNCF project) — PR #1493 approved; **Certified Meshery Contributor (CMC)** certified; reported 2 production bugs in Layer5 Cloud platform.
- Applying for **LFX CNCF Mentorship 2026 Term 2** (Meshery AI Adapter + Agentic CI Pipelines); attended weekly Newcomers meetings and engaged on issues #19092 and #19012.

Estimation of Failure of Airplane Engines | *Student Researcher – DIAT Pune*

July 2024 – Dec 2024

- Under the guidance of **Dr. Yogeshwar Singh**, DIAT, Pune
- Designed and developed a data preprocessing and fusion dashboard; released ML models for **Remaining Useful Life (RUL)** estimation on the NASA C-MAPSS dataset with multi-sensor time-series data.

ACHIEVEMENTS & COMMUNITY

- LeetCode** – Solved 350+ DSA problems; strong foundation in algorithms, data structures, and competitive programming
- Smart India Hackathon 2023** – Selected and participated at national level
- Varroc Eureka 3.0** – Showcased a real-time ADAS system to automotive industry judges at national-level hackathon
- Powerlifting** – Winner, Intra IIIT-K Sports Meet 2026
- Basketball** – Winner, school-level and Intra IIIT-K Sports Meet 2023
